Script Name:

## WTR Weekly Rest Period

Script Type:

## To-Do List

### Overview

This script is designed to highlight any Weekly Rest Period WTR breaches on the to-do list so that a manager can then act on it. It is a to-do list only script to be used in conjunction with the WTR maintenance script.

### Dependencies

- WTR Maintenance Event Handler Script. It will produce no data without this!

### Operation Example

- An employee breaches the WTR Weekly Rest Period rule then a to-do list item will be presented on the to-do list.

### Configuration

- Assigned against the managers to-do list policy under the 'scripting' option. Tick the WTR Weekly Rest Period.
- Values can be changed via File -> Reporting -> Working Time Regulations. Default is 24 hours rest in a period before the breach appears.

### Explanation of notable fields

<p>Private Const LOOKBACK_PERIOD As Long = 7</p>	<p>Number of days the to-do list will look back on for breaches. Any breaches older than this date will not appear</p>
<p>Private Const SHOW_TOP_N_RECORDS As Long = 50</p>	<p>Number of breaches that can appear on a managers to-do list.</p>
